Subject: RE: Shutdown Contingency Planning

John,

At present, only and Keystone have on-going on-site work or infrastructure that requires a regular human on-site presence in a potential shutdown. In both cases, the work includes operation of an active GW P&T system and monitoring of residential point-of-use filtration units. Based on the stage of both cleanups and relationship between EPA and the performing parties, mandatory EPA involvement in a potential shutdown would only be necessary should an unexpected problem occur that required input from EPA to the PRPs to ensure compliance with decision documents and settlement agreements.

More details, by site, are presented below, and only for work that would likely occur in the 30-day period after the current continuing resolution ends:

Nonresponsive based on revised scope

Keystone Sanitation LF – office/desktop work only
- Receipt and review of OU-2 annual report (with contractor support)

Nonresponsive based on revised scope

Call/respond with questions or concerns.

Thanks – Chris

Christopher Sklaney

Subject: Shutdown Contingency Planning

Hi All,

I talked to everyone who was in the office yesterday about this but since you were flexing, I didn't have a chance to touch base with you. We are starting to develop our contingency plan for a possible shutdown after next week. Please let me know by COB today what ongoing work is scheduled at your sites in the next 30 days that is being performed by contractors. Please include everything from field work, to report preparation, to PRP oversight. Let me know if you have any questions.

Thanks,

John F. Epps III
